Projects

Iot Based Health Monitoring System

Duration: 3 months

Technologies Used: Embedded C, IoT Sensors

- Developed an IoT-based health monitoring system that tracks real-time health metrics (e.g., temperature, heart rate, ECG).
- Leveraged cloud technology to transmit data to Ubidots, enabling remote monitoring.
- Enhanced health management with timely alerts and accessible data for users.

ATM Simulation Application in Java

Duration: 2 months

Technologies Used: Java, JDBC, MySQL

- Implemented a Java-based ATM simulation with features like user authentication, balance inquiry, deposit, withdrawal, and password recovery.
- Used MySQL for secure and efficient database management.
- Enhanced understanding of secure financial transactions and database interaction.

Declaration

I hereby declare that all the information provided above is true to the best of my knowledge and belief.
